

John Deere Engine Repower

August 21, 2009

A pair of brand-new John Deere 6.8L PowerTech engines dangled from the hook of a crane today and after a brief flight they touched down on the engine beds of a 56' Seaton custom trawler.

This vessel enabled us to exercise our new dealership arrangement with John Deere, and the service and responsiveness from them has been excellent.

While she is here the owner is taking advantage of our other capabilities. We have aligned the shaft and strut, made a few gelcoat and paint touch-ups, gave her a fresh coat of bottom paint, replaced the transducer, and installed a new Miele washer and dryer.
